
Study 3, the null-side cost of each method in z-units (KGW, α = 0.01, h = 1; per-key methods over the keys with a positive threshold; scheme-level over the fitting keys)
(a) raw rule, h = 1: medians over the 20 calibration units
(b) distinct rule, h = 1: medians over the 20 calibration units
median key (q50)
5%–95% keys (medians over units)
scheme-level threshold
null-side cost z(t) − z_α (z-units)
